

YOEL NEGASI

Oakland, CA 94612 | 510-590-7905 | yoelneg25@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

Senior Full Stack Software Engineer with 8+ years of experience designing and scaling end-to-end systems, including enterprise platforms, governance workflows, and scalable integrations. Expertise in React, Next.js, Node.js, and NestJS, with strong experience in cloud platforms (GCP, AWS, Azure) and CI/CD automation. Proven track record building systems that improve operational efficiency, automate workflows, and support large-scale engineering processes.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python
- **Front-End Technologies:** React, Next.js, Angular, React Native, Material UI, Redux, Bootstrap, HTML, CSS
- **Back-End & APIs:** Node.js, Express, NestJS, GraphQL, RESTful APIs
- **Databases:** MongoDB, PostgreSQL, MySQL
- **DevOps & Cloud:** Azure, AWS, GCP, GitHub Actions (advanced workflows), Docker, RHEL 8/9
- **Version Control & CI/CD:** Git, GitHub, GitLab
- **AI-assisted development tools:** GitHub Copilot, Cursor, Claude

PROFESSIONAL EXPERIENCE

Pacific Gas and Electric (PG&E)

Sep 2025 - present

Senior Software Engineer

Oakland, CA

Supporting infrastructure inspection process by building applications that enable analysis field data and high -resolution imagery for transmission and distribution assets

- Designed and built high performance image inspection tools using React and TypeScript, enabling efficient analysis of large high-resolution datasets through real-time zooming, annotation and defect tagging
- Architected and implemented backend services using Node.js and PostgreSQL to support scalable inspection workflows and ensure data integrity across distributed systems
- Designed and secured image storage and delivery pipelines using AWS S3 and presigned URLs, optimizing access to large image assets
- Built RBAC-based workflow systems and approval processes to support multi-stage inspection and compliance requirements
- Contributed to system architecture for processing and managing large volumes of image data across distributed storage systems
- Deployed and operated containerized services using Docker and Kubernetes in AWS, ensuring scalability and reliability of production systems

Optum (UnitedHealth Group)

Jul 2024 – Aug 2025

Senior Software Engineer

Remote

Developing enterprise-scale software solutions to support internal technology governance, process automation, and lifecycle management initiatives.

- Designed and implemented full-stack applications using NestJS, Next.js, TypeScript, and Prisma, improving data visibility and operational efficiency across business units.
- Built and scaled modular microservices aligned with Azure enterprise architecture, driving seamless integration with compliance workflows, SDLC phases, and lifecycle checkpoints across business units.
- Designed and implemented intelligent automation pipelines using GitHub Actions to enforce policy compliance, automate governance tasks, and enhance operational efficiency
- Integrated enterprise-grade Azure DevOps practices and contributed to system planning aligned with SDLC phases including requirements, build, test, deploy, and audit
- Contributed to infrastructure migration efforts, including RHEL 8 to RHEL 9 transitions, ensuring smooth database compatibility and application continuity.
- Collaborated cross-functionally with engineering leads, product managers, and compliance teams to deliver secure, maintainable, and extensible systems

Home Depot

Jul 2023 - Jul 2024

Software Engineer

Atlanta, GA

Engineered an enterprise-level platform using Node.js, Express, and GraphQL to enhance operational efficiency and support scalable integrations for partner systems.

- Migrated a legacy task management system to a modern React-based platform, delivering end-to-end features that improved performance and usability by 35% and enhancing usability
- Developed reusable UI components with Material UI to ensure design consistency and improve user-facing interfaces, aligning with modern full-stack development standards.
- Managed application state using Redux to facilitate real-time updates and reliable tooling, contributing to both internal and partner facing workflows.
- Designed, deployed, and optimized databases on Google Cloud Platform (Cloud Spanner, Cloud SQL, Firestore) to ensure robust and scalable data handling for high-volume systems.
- Built and maintained CI/CD pipelines on GitHub Actions and integrated them with GCP services (Cloud Build, Cloud Run, and GKE), including IAM role configurations to ensure secure, scalable deployments.
- Implemented monitoring and logging with Google Cloud Operations (Stackdriver) to proactively detect issues, improve system reliability and reduce production downtime

Ergonomic Group

Sep 2022 - Jul 2023

Full Stack Engineer

New York, NY

Designed and implemented a customizable web application suite using React, Next.js, and TypeScript, contributing to scalable referral integration solutions.

- Developed a supply chain management platform with a focus on building reliable, full-stack applications that supported robust data ingestion and scheduling workflows.
- Built visually engaging and responsive interfaces with Material UI, ensuring polished, user-facing experiences for diverse stakeholders.
- Managed state handling with Redux to achieve real-time data synchronization and support partner and marketing teams in experiment driven tooling.
- Established RESTful APIs using Node.js and NestJS integrated with PostgreSQL to provide secure, high-performance data exchange in line with compliance requirements.
- Implemented role-based access control (RBAC) to enhance security and compliance, instrumental for managing sensitive data in partnership systems.
- Leveraged GitHub Actions for automating build, test, and deployment workflows, improving overall development efficiency and production reliability.

Co-Bounce Company

Oct 2019 - Aug 2022

Software Engineer

Sacramento, CA

Built and maintained web applications for insurance, tourism, and educational industries.

- Developed RESTful services to support scalable web applications, enhancing system performance and reliability • Collaborated with cross-functional teams using Agile methodology for iterative software development.
- Created a standalone authentication system using React, Redux, and Node.js.
- Designed responsive user interfaces with HTML5, CSS3, and JavaScript, ensuring cross-browser compatibility.
- Developed and maintained backend APIs using Node.js, NestJS, and Express.
- Debugged and optimized asynchronous API calls using AJAX and JSON.

Liya Enterprise Company

Jan 2017 - Sep 2019

Full Stack JavaScript Developer

Asmara, Eritrea

Developed single-page applications (SPAs) and optimized system performance.

- Designed and implemented frontend components using React, Next.js, and Angular
- Built backend services using Node.js, NestJS, Express.js, and MongoDB.
- Adopted Agile methodologies, participating in daily stand-ups and sprint planning.
- Ensured cross-browser compatibility and responsive design for diverse user accessibility.
- Integrated authentication and authorization mechanisms for secure access control

EDUCATION

Maharishi International University - Fairfield, IA - Master's, Software Development, 2022

Eritrean Institute of Technology, Asmara, Eritrea - BSc, Computer Science, 2017
