

YOEL NEGASI

Oakland, CA 94612 | 510-229-5672 | yoelg.negasi25@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Full Stack Software Engineer with 8+ years of experience building scalable enterprise platforms, developer tooling and intelligent automation systems. Specialized in React, Next.js, Node.js, NestJS, and cloud infrastructure across AWS, Azure and GCP. Experienced designing CI/CD automation, governance workflows, audit systems, and AI-assisted engineering solutions that improve operational efficiency and streamline large-scale software delivery.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python
- **AI & Automation:** OpenAI API, Claude API, Prompt Engineering, LLM integrations, RAG, GitHub Copilot, Cursor, Claude, Workflow orchestration
- **Front-End Technologies:** React, Next.js, Angular, React Native, Material UI, Redux, Bootstrap, HTML, CSS
- **Back-End & APIs:** Node.js, Express, NestJS, GraphQL, RESTful APIs
- **Databases:** MongoDB, PostgreSQL, MySQL, pgvector
- **DevOps & Cloud:** Azure, AWS, GCP, GitHub Actions (advanced workflows), Docker, RHEL 8/9
- **Version Control & CI/CD:** Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

Pacific Gas and Electric (PG&E)

Sep 2025 - present

Senior Software Engineer

Oakland, CA

Supporting infrastructure inspection process by building applications that enable analysis field data and high-resolution imagery for transmission and distribution assets

- Designed and built high-performance image inspection tools using React and TypeScript, enabling efficient analysis of large high-resolution datasets through real-time zooming, annotation and defect tagging
- Architected and implemented backend services and GraphQL APIs using Node.js and PostgreSQL to support scalable inspection workflows and ensure data integrity across distributed systems
- Designed and secured image storage and delivery pipelines using AWS S3 and presigned URLs, optimizing access to large image assets
- Built RBAC-based workflow systems and approval processes to support multi-stage inspection and compliance requirements
- Supported scalable image analysis and defect-tagging workflows designed to enable future AI-assisted infrastructure inspection capabilities.
- Deployed and operated containerized services using Docker and Kubernetes in AWS, ensuring scalability and reliability of production systems

Optum (UnitedHealth Group)

Jul 2024 – Aug 2025

Senior Software Engineer

Remote

Developing enterprise-scale software solutions to support internal technology governance, process automation, and lifecycle management initiatives.

- Designed and implemented full-stack applications and GraphQL services using NestJS, Next.js, TypeScript, and Prisma, improving data visibility and operational efficiency across business units.
- Built and scaled modular microservices aligned with Azure enterprise architecture, driving seamless integration with compliance workflows, SDLC phases, and lifecycle checkpoints across business units.
- Built GitHub Actions and Node.js automation pipelines that streamlined SDLC workflows and reduced manual engineering effort across development teams.
- Developed internal developer tooling and workflow automation systems to reduce manual operational overhead and improve large-scale engineering processes.
- Contributed to infrastructure migration efforts, including RHEL 8 to RHEL 9 transitions, ensuring smooth database compatibility and application continuity.
- Partnered with engineering leaders, product managers, and compliance teams to solve complex cross-functional challenges and deliver secure, scalable systems.

Home Depot

Software Engineer

Jul 2023 - Jul 2024

Atlanta, GA

Engineered an enterprise-level platform using Node.js, Express, and GraphQL to enhance operational efficiency and support scalable integrations for partner systems.

- Migrated a legacy task management platform to React and GraphQL, improving performance, scalability, and user experience by 35% while modernizing a critical enterprise workflow.
- Re-engineered the React 19 migration workflow using AI-powered client-server mismatch detection, delivering a 10× speedup across 200+ components.
- Managed application state using Redux to facilitate real-time updates and reliable tooling, contributing to both internal and partner-facing workflows.
- Designed, deployed, and optimized databases on Google Cloud Platform (Cloud Spanner, Cloud SQL, Firestore) to ensure robust and scalable data handling for high-volume systems.
- Built and maintained CI/CD pipelines on GitHub Actions and integrated them with GCP services (Cloud Build, Cloud Run, and GKE), including IAM role configurations to ensure secure, scalable deployments.
- Implemented monitoring and logging with Google Cloud Operations (Stackdriver) to proactively detect issues, improve system reliability and reduce production downtime

Ergonomic Group

Full Stack Engineer

Sep 2022 - Jul 2023

New York, NY

Designed and implemented a customizable web application suite using React, Next.js, and TypeScript, contributing to scalable referral integration solutions.

- Developed a supply chain management platform with a focus on building reliable, full-stack applications that supported robust data ingestion and scheduling workflows.
- Built visually engaging and responsive interfaces with Material UI, ensuring polished, user-facing experiences for diverse stakeholders.
- Managed state handling with Redux to achieve real-time data synchronization and support partner and marketing teams in experiment driven tooling.
- Established RESTful APIs using Node.js and NestJS integrated with PostgreSQL to provide secure, high-performance data exchange in line with compliance requirements.
- Implemented role-based access control (RBAC) to enhance security and compliance, instrumental for managing sensitive data in partnership systems.
- Leveraged GitHub Actions for automating build, test, and deployment workflows, improving overall development efficiency and production reliability.

Co-Bounce Company

Software Engineer

Oct 2019 - Aug 2022

Sacramento, CA

Built and maintained web applications for insurance, tourism, and educational industries.

- Developed RESTful services to support scalable web applications, enhancing system performance and reliability
- Created a standalone authentication system using React, Redux, and Node.js.
- Designed responsive user interfaces with HTML5, CSS3, and JavaScript, ensuring cross-browser compatibility.
- Developed and maintained backend APIs using Node.js, TypeScript, NestJS, and Express.
- Debugged and optimized asynchronous API calls using AJAX and JSON.

Liya Enterprise Company

Full Stack JavaScript Developer

Jan 2017 - Sep 2019

Asmara, Eritrea

Developed single-page applications (SPAs) and optimized system performance.

- Designed and implemented frontend components using React, Next.js, and Angular
- Built backend services using Node.js, NestJS, Express.js, and MongoDB.
- Adopted Agile methodologies, participating in daily stand-ups and sprint planning.
- Ensured cross-browser compatibility and responsive design for diverse user accessibility.
- Integrated authentication and authorization mechanisms for secure access control

EDUCATION

M.S., Software Development — Maharishi International University, 2022

B.S., Computer Science — Eritrean Institute of Technology, 2017
